

## 2024 Indian Election Analysis

Author: Ansh Gupta

Date: December 2024

### Introduction

This research report provides an analysis of the 2024 Indian Election Results, focusing on party performance, voting trends, and margin of victory. The analysis aims to identify key insights into the political landscape, highlighting the dominance of leading parties and voter behavior.

### Data Handling

The election data was sourced from official government records and processed using Python. The data was cleaned and structured using the Pandas library to ensure accuracy and consistency. Non-numeric values were converted for analysis, and missing data was handled using standard imputation methods.

### Analysis

The analysis focused on identifying:

- Total seats won by each party.
- Margin of victory for each constituency.
- Parties with the highest and lowest winning margins.
- Performance comparison between major candidates (Rahul Gandhi, Narendra Modi, Amit Shah).

### Data Visualization

To present the insights clearly, data visualizations were created using Matplotlib and Seaborn. Bar plots were used to show the distribution of seats among major parties, and comparison graphs highlighted the voting margins for leading candidates.

### Conclusion

The 2024 Indian Election analysis revealed significant insights into the political landscape. The analysis identified key parties dominating the elections and the impact of voter behavior on election outcomes. These findings provide valuable strategic insights for political analysts and policymakers.
